

Sam Warner

I'm a software engineer with strong communication and organization skills seeking a team-oriented and ambitious work environment after 8 years in the industry. I value emotional intelligence, flexibility, default accessibility, and user delight.

In my past jobs, I've proven my ability to use a creative, analytical, and compassionate mindset to help a company function more efficiently and behave more kindly than when I found it. I'd love to learn more about what your needs are and how I can help contribute to the success of the company.

EXPERIENCE

Software Engineer **AmTrust Financial** 2024 - PRESENT C# > SQL > APIs > .NET > TypeScript

Saved my team 40 development hours every week by initiating and converting developer testing from extensive manual UI tests to automation suites using AI and Playwright's MCP server. Automation saved screenshots, JSON request files, and documents with dynamic naming and compared HTML file results. Collaborated on cross-functional teams ranging in size from 8 to 24 to convert a massive codebase into multiple APIs divided by business.

Engineering Mentor **Tech Elevator** AUGUST - OCTOBER 2023 Java > PostgreSQL > Vue.js > Git > APIs

Spearheaded a short-term project to help bootcamp graduates improve engineering skills such as Git, calling and maintaining APIs, and transforming business requirements into an ERD for a relational database through making a "city tours" app from scratch using the Google Maps API. Led daily remote pair programming and individualized lessons. Created a Kanban board of detailed, contextualized tickets with minimal task dependencies.

Software Engineer **Within3** MAY 2020 - APRIL 2022 Ruby > Rails > JavaScript > SQL > VirtualBox

Collaborated on a cross-functional Agile team to maintain, add features to, and implement redesign details on a large codebase using Jira. My greatest pleasure was creating tooling that minimized friction, streamlined manual processes, and improved UX for internal and external users. My work permitted medical researchers, advisory boards, and organizations to gather data on medications, processes, and symptoms during the pandemic.

Web Developer **WiredViews** JUNE 2018 - MARCH 2020 C# > ASP.NET > SQL > Angular > JavaScript > Azure

Worked independently in an agency setting to create websites of varying complexity, from nonprofit event management and engagement to an externally and internally facing corporate CMS and blog where I facilitated imports and integrations among six backend third parties. Utilized Azure functions, deployment environments, databases, pipelines, and other Devops. Acted as a primary contributor on a successful pitch to a potential client.

AI PROJECTS

Level 2: Personal Assistant

2026.02 | Created a personal assistant using vectors in a database, a Telegram bot, and AI inference

Level 3: Calendar App

2026.03 | Write prompts and review AI's PRs to create a calendar application integrated with my personal assistant.

Level 4-5: Book Club App

2026.04 | Had AI create a series of work items in Gitlab, dynamically pick up items at my request, and independently create PRs, review its own PRs using specialized agents, build, and deploy.

FORMAL EDUCATION

Java Coding Bootcamp

2018 | Tech Elevator

Bachelor of Arts in German, Bachelor of Arts in Film Production

2016 | Bowling Green State University
Studied abroad at the Paris-Lodron Universität in Salzburg, Austria

AWARDS

First place winner at Cleveland Metroparks Hackathon out of 11 teams in April of 2018 with an ensuing business proposal.
